Problem – Solution Fit Template:

The Problem-Solution Fit simply means that you have found a problem with your customer and that the solution you have realized for it actually solves the customer's problem. It helps entrepreneurs, marketers and corporate innovators identify behavioral patterns and recognize what would work and why.

Purpose:

- Solve complex problems in a way that fits the state of your customers.
- Succeed faster and increase your solution adoption by tapping into existing mediums and channels of behavior.
- Sharpen your communication and marketing strategy with the right triggers and messaging.
- Increase touch-points with your company by finding the right problem-behavior fit and building trust by solving frequent annoyances, or urgent or costly problems.
- Understand the existing situation in order to improve it for your target group.

Filled Canvas — ShopEZ Problem-Solution Fit:

1. CUSTOMER SEGMENT(S) Online shoppers (18–40 yrs) buying apparel, footwear & accessories. Small online sellers/admins needing an easy way to list products & track orders.	6. CUSTOMER CONSTRAINTS Low trust in unfamiliar sites (fraud, fake products). Slow, cluttered sites on mobile data/low-end devices. Unclear checkout: pricing, delivery dates, order status. Admins lack technical skill for inventory/sales data.	5. AVAILABLE SOLUTIONS Marketplaces (Amazon, Flipkart) — trusted, generic, high seller fees. Shopify/WooCommerce — customizable, needs setup cost & skill. WhatsApp/Instagram DM orders — free, unorganized, no tracking.
2. JOBS-TO-BE-DONE / PROBLEMS Find & compare products by category, gender, price, ratings. Reliable cart/checkout with live totals & delivery dates. Track past & current orders without contacting support. Admin: add/update products, monitor orders & revenue.	9. PROBLEM ROOT CAUSE Small sellers can't afford custom platforms → fall back to manual, error-prone channels (DMs, sheets). Existing tools are either too rigid (marketplaces) or too technical to self-host (Shopify/WooCommerce).	7. BEHAVIOUR Browse on mobile, compare 2–3 products, check reviews before adding to cart. Abandon cart when checkout is long or costs unclear. Admins check analytics briefly, daily/weekly.
3. TRIGGERS Seeing a discount banner / new arrival on the home page. Friend's recommendation or social media ad. Urgent need (festival shopping, wardrobe refresh).	10. YOUR SOLUTION ShopEZ: a full-stack MERN platform with a secure, JWT-authenticated catalog, search & filters, cart, wishlist and order tracking for customers, plus an admin dashboard with analytics, product builder and order management for sellers. Trust gap → solved with bcrypt + JWT auth, rate limiting, Helmet-secured APIs. Complexity gap → solved with a simple admin dashboard instead of manual tools. Checkout friction → solved with clear totals, size/qty controls, visible delivery dates.	8. CHANNELS of BEHAVIOUR 8.1 Online: catalog, search/filters, wishlist, cart, checkout, order tracking, admin dashboard — within the ShopEZ web app. 8.2 Offline: word-of-mouth referrals and in-person product discussions that lead to an online ShopEZ visit.
4. EMOTIONS: BEFORE / AFTER Before: hesitant, unsure which site to trust, annoyed by slow pages. After: confident — secure login, clear pricing, visible order tracking.	<i>Note: Boxes 1–3 and 5–9 map customer segment, constraints, behaviour and root cause. Box 4 (Emotions) and Box 10 (Solution) close the loop — turning frustration into confidence.</i>	

Summary:

ShopEZ addresses the trust, complexity and friction gaps faced by both everyday online shoppers and small online sellers. For customers, it replaces hesitant, unorganized buying behaviour (manual DM orders, distrust of unfamiliar sites) with a secure, transparent, and fast shopping experience — from catalog search to checkout to order tracking. For sellers/admins, it replaces fragmented spreadsheet- or chat-based selling with a single dashboard for products, orders, users and real-time revenue analytics. The fit is validated by aligning each customer constraint and behaviour pattern (rows 1–3 of the canvas) directly to a corresponding feature in the ShopEZ solution (box 10).
