Project Name	ShopEZ – E-Commerce Application
Maximum Marks	4 Marks

Project Overview:

Project Name: ShopEZ – E-Commerce Application

Project Description: ShopEZ is a full-stack MERN e-commerce platform offering customers a secure, JWT-authenticated shopping experience (catalog browsing, search & filters, cart, wishlist, checkout and order tracking) and giving admins a dashboard for product, order, and user management with real-time sales analytics.

Project Version: 1.0.0

Testing Period: 10 June 2026 to 17 June 2026

Testing Scope:

- User registration, login, and JWT-based session handling.
- Product catalog browsing, search, filtering, and sorting.
- Shopping cart: add, update quantity, and remove items.
- Wishlist add/remove functionality.
- Checkout flow, order placement, and order history/tracking.
- Admin dashboard analytics, product builder, and order/user management.
- User stories covered: “As a customer, I want to find and buy products easily,” “As a customer, I want to track my order,” and “As an admin, I want to manage products, orders, and view sales performance.”

Testing Environment:

URL/Location: http://localhost:5173 (Client) and http://localhost:5000/api (Server) — or the deployed staging URL.

Credentials (if required): Customer — rahul@example.com / user123. Admin — admin@shopez.com / admin123 (seeded via npm run seed).

Test Cases:

Test Case ID	Test Scenario	Test Steps	Expected Result	Actual Result	Pass/Fail
TC-001	User registers a new account with valid details	1. Go to Register page. 2. Enter valid username, email & password. 3. Click Register.	Account is created and user is redirected to the login/home page.	Account created successfully; redirected to home page.	Pass

TC-002	User attempts registration with an already-used email	1. Go to Register page. 2. Enter an email already in the database. 3. Click Register.	System rejects registration and shows a clear "email already exists" error.	Error message displayed as expected; registration blocked.	Pass
TC-003	User logs in with correct credentials	1. Go to Login page. 2. Enter registered email & correct password. 3. Click Login.	User is authenticated, JWT is issued, and user lands on the Home page.	Login successful; JWT stored and Home page loaded.	Pass
TC-004	User logs in with incorrect password	1. Go to Login page. 2. Enter registered email & wrong password. 3. Click Login.	Login is rejected with an "invalid credentials" message; no token issued.	Error shown correctly; no JWT issued.	Pass
TC-005	Customer searches and filters products by category and gender	1. Go to Products page. 2. Enter a search term. 3. Apply category and gender filters.	Product list updates to show only matching items in real time.	List filtered correctly for all combinations tested.	Pass
TC-006	Customer adds a product to the cart and updates quantity	1. Open a product. 2. Select size. 3. Click Add to Cart. 4. Go to Cart and increase quantity.	Item appears in cart with correct size; total price updates when quantity changes.	Cart and totals updated correctly after quantity change.	Pass
TC-007	Customer places an order at checkout	1. Go to Cart. 2. Proceed to checkout. 3. Enter shipping details and payment method. 4. Confirm order.	Order is created, cart is cleared, and order appears in order history with status "order placed".	Order created and visible in Profile > Orders; cart emptied.	Pass
TC-008	Customer toggles a product in/out of the wishlist	1. Open Products page. 2. Click the wishlist icon on a product. 3. Click it again to remove.	Product is added to wishlist on first click and removed on second click.	Wishlist icon toggled state correctly both times.	Pass
TC-009	Admin publishes a new product via the Product Builder	1. Log in as admin. 2. Go to New Product. 3. Fill in title, price, sizes, category. 4. Click Publish.	Product is saved and appears in All Products list and on the customer-facing catalog.	New product visible in both admin list and public catalog immediately.	Pass
TC-010	Admin updates an order's status	1. Log in as admin. 2. Go to All Orders. 3. Select an order. 4. Change status to "shipped".	Order status updates in admin panel and reflects on the customer's order tracking view.	Status change reflected correctly on both admin and customer views.	Pass

Bug Tracking:

Bug ID	Bug Description	Steps to reproduce	Severity	Status	Additional feedback
BG-001	Cart quantity field allows entering 0, resulting in a ₹0 line item instead of removing the product.	1. Add a product to cart. 2. In Cart page, manually set quantity to 0.	Medium	Open	Suggest auto-removing the item or blocking values below 1.
BG-002	Wishlist icon state resets after a page refresh even though the item is still saved server-side.	1. Add a product to wishlist. 2. Refresh the Products page.	Low	In Progress	Likely a state-sync issue on initial load; not data loss.
BG-003	Admin dashboard revenue chart shows a brief flash of \$0 before real data loads, which can look like an error.	1. Log in as admin. 2. Navigate to Admin Dashboard.	Low	Open	Cosmetic only; add a loading skeleton instead of a \$0 default.
BG-004	Rate limiter occasionally blocks legitimate users during rapid back-to-back add-to-cart clicks.	1. Add the same product to cart 10+ times in under a minute.	High	Closed	Resolved by raising the API rate limit threshold for the cart route.

Notes:

- Ensure that all test cases cover both positive and negative scenarios.
- Encourage testers to provide detailed feedback, including any suggestions for improvement.
- Bug tracking should include details such as severity, status, and steps to reproduce.
- Obtain sign-off from both the project manager and product owner before proceeding with deployment.
